MILLERS OILS

FLUID THINKING

One thing is certain – things move on, constantly. The demands placed on vehicles and plant increase all the time. The pressure to stay ahead never stops growing. Better performance, greater efficiency, reduced costs – no one understands these pressures better than Millers Oils.

For more than a century, we've developed and supplied advanced lubricants and fuel treatments for a wide spectrum of automotive, commercial vehicle and industrial applications, working hard to keep our customers in the lead.

To make this happen, innovation has always been the engine of our operation. We invest heavily in product development and research to produce some of the most advanced formulations in the world. But to our customers we're not simply a supplier, we're a company of ideas. We think ahead. We help them to adapt as their needs change. We offer creative solutions to their practical problems.

It takes energy, commitment and a flexible approach throughout. Compared to others in the oil industry, we're uniquely set up to respond to new developments. We're quicker to adopt new technologies and advances, and to recognise how these can be developed for our customers' benefit. In short, we like to keep things fluid.

The end result is a range of high-quality, leading edge products that you can rely on for greater protection and performance under the most extreme conditions, whatever the application. **Now there's a thought.**

MILLERS OILS

Over the years, we've made a significant impact upon the market with technically advanced, sometimes revolutionary brands. What follows is a dipstick measure of Millers Oils, the company and its achievements.

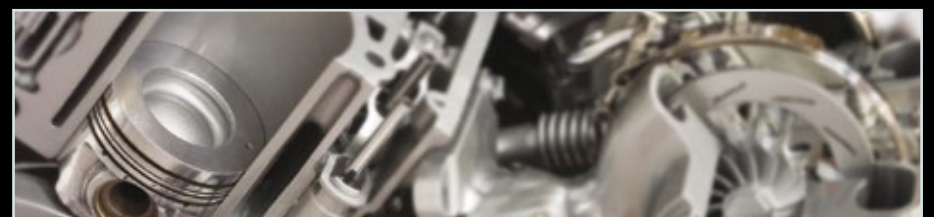

- **We do things differently** we're still an independently-owned family business, as we have been since 1887.
- **We go the extra mile.** Our products meet the most stringent original equipment manufacturers' specifications, but many go further still and carry manufacturers' own approvals.
- **We've helped to revolutionise** the truck industry with our commercial vehicle products, increasing average oil drain intervals up to 100,000 kilometres, depending on the vehicle type.
- **We've won** the Institute of Transport Management's 'Best Aftermarket Lubricants' award, not once but twice.
- **We developed and launched the first** engine oil for diesel cars which was endorsed by Diesel Car Magazine.
- **Millers Oils specialist products have earned their place** on the grid at the highest levels of motorsport. Many of the innovations we've developed for the extremes of competition directly influence the development of products for other sectors.
- **We were awarded the prestigious International "Motorsport Company of the Year" award** in 2005 – a high accolade within a seriously competitive sector.
- **Our HQ** is in Brighouse in the north of England. From here our distribution network extends worldwide – across Europe to the Far East, China, New Zealand, Taiwan, Hong Kong, Korea and Bangladesh.
- **Quality counts.** Millers Oils is ISO9001 certified, a member of FPAL, UKLA, UEIL and an Affiliate Member of the Classic British Quality Charter.

THE TOP LINE

Millers Oils products are supplied in a range of pack sizes, with oils generally supplied in sizes ranging from 1 Litre to 1000 Litres to suit your requirements.

MILLERS OILS

## DRIVING AHEAD

From the steady build-up of motorway miles to the chicanes of the world's most challenging circuits. From the everyday duties of shopping and school runs to the care and protection of an old classic. Whichever road today's drivers take, we are out there, keeping the wheels in motion with a range of technically advanced automotive products.

AUTOMOTIVE

Driving today takes many different forms. Equally, the demands placed on engines vary widely. Which means that not all engine oils should perform the same. We understand – and we've responded with a comprehensive range of engine oils, transmission oils and fuel treatments designed specifically to deliver outstanding performance, protection and reliability wherever they are applied.

We are specialists. But we're also generalists, with expertise across all areas of motoring. There's a clear benefit here – the innovations we develop say for motorsport applications, directly influence the development of products in other areas. That's the difference with Millers Oils. All our products are driven by innovation, but the ideas travel faster.

**It's a unique approach and it's already transforming the driving experience. With our extensive range of high quality, premium engine oils, transmission oils and fuel treatments, a growing number of drivers now trust Millers Oils to provide cleaner running engines, better fuel economy, lower maintenance costs and longer engine life.**

It's the way forward.

PREMIUM

Trident

Motorsport

For motorists who demand the best

Our flagship range of premium grade engine oils, transmission oils and fuel treatments, developed to maximise performance from today's advanced engines. Featuring semi synthetic, full synthetic and long life products, our Premium range has been proven to deliver improved performance, cleaner running, greater fuel efficiency and longer engine life. Which is why many of our brands have earned the official approval of leading manufacturers such as BMW, Mercedes-Benz and VW.

Value without compromise

Our Trident branded engine oils stand for quality and value you can trust. Developed principally for professional and trade users, the Trident range offers a consistently high standard of quality, suitable for high volume use in the workshop and covering all servicing requirements from older and higher mileage vehicles to the latest high technology designs. Trident products surpass manufacturers standards, so you can always be sure of their suitability and performance.

The spirit of competition

The racetrack and rally stages provide the ultimate proving ground for high performance products – and it's here that Millers Oils has built a strong reputation. From club drivers to teams in the British Touring Car Championship and British Rally Championship we've earned our place on the grid, not through marketing, but solely through the quality of our products and technical support. Drivers, engine builders and engineers competing at all levels of motorsport demand lubricants and fuel treatments that will perform under the most extreme conditions. We're working with them, developing technically advanced products to boost performance, provide maximum protection and prolong component life. Innovation, for us, is a race without a finish line.

Driving classics into the future

Millers Oils is one of the few companies to offer a range of engine oils, transmission oils and fuel treatments developed specifically for the owners of classic cars, motorcycles and commercials. Our Classic products benefit from the latest advances in lubrication technology to create oils that not only meet older viscosity requirements but also provide maximum protection and actively prolong the life and performance of treasured vehicles.

DELIVERING MORE

COMMERCIAL VEHICLE

In an increasingly competitive climate, keeping your fleet on the road and earning for your business is a clear priority. And it's one that Millers Oils shares with you. With a range of engine oils, transmission oils and fuel treatments developed specifically for commercial vehicles, we're helping to minimise downtime, reduce running costs and make fleet management altogether simpler.

- TRANSPORT
- PLANT & EQUIPMENT
- AGRICULTURAL
- OFF HIGHWAY
- MARINE

Switching to Millers Oils commercial vehicle products brings an immediate reduction in fuel costs through greatly increased engine efficiency. Millers Oils Eclipse™ for example, is a revolutionary new fuel additive that not only increases efficiency and reduces overall fuel costs, but also lowers emissions and cleans injectors. Low treat rates for each application make Eclipse™ simple and cost effective to use. Across an entire fleet, Eclipse™ can add up to a significant cost saving.

Over the longer term, there are further benefits to be gained through greater mechanical reliability, lower maintenance costs, reduced downtime and prolonged engine life. Constant innovation has created a range of products, which bring measurable results. Our commercial vehicle range of engine oils have extended drain intervals up to 100,000 kilometres, depending on the vehicle – which means lower servicing costs and less time off the road.

Developed in our own state of the art laboratories, our products are designed to meet or exceed the most stringent specifications demanded by vehicle manufacturers. Many of Millers Oils commercial products have earned the approval of a number of leading major original equipment manufacturers. So, you can rely on Millers Oils to fulfil your fleet's service requirements and at the same time, comply fully with manufacturers' warranties.

**But it's not just about supplying oil. Our products are backed up by an accessible technical support service that's open to all customers. From our own laboratories we provide fuel and oil sampling services which allow you to monitor the condition of your fleet, right down to the health of individual vehicles. These are precise diagnostic tools designed to help you manage your fleet more effectively. And they're only a phone call away.**

- Millers Oils fuel treatments actively increase fuel efficiency, lower costs, help fuel systems run cleaner and reduce emissions.
- Our technically advanced range of engine and transmission oils meet the requirements of vehicle manufacturers specifications and comply fully with their warranties.
- Accessible technical support service helps fleet managers to monitor the condition of vehicles accurately and cost-effectively.
- Millers Oils also provide a range of high performance ancillary products.

MILLERS OILS

## EXCELLENCE IN THE MAKING

Industry places high demands on plant and machinery. Modern manufacturing processes call for longer running periods, greatly increased efficiency and minimum downtime for maintenance or repair. With a highly advanced range of lubricants, cutting fluids and coolants, Millers Oils keeps the wheels of industry turning.

Millers Oils industrial products have been developed in response to the real needs of manufacturers. We work directly with customers across a range of sectors – among them engineering, general industrial, food, beverage and textiles – to deliver the maximum efficiency throughout their manufacturing processes. We respond with products that help improve performance, increase reliability and prolong machine and tool life.

All products are supported in the field by our experienced technical teams who provide advice and analysis, either on-site or at our own laboratories, making certain that our products continue to perform at the optimum. We also maintain a regular dialogue with the machine manufacturers themselves to make certain our lubricants always meet or exceed their specifications.

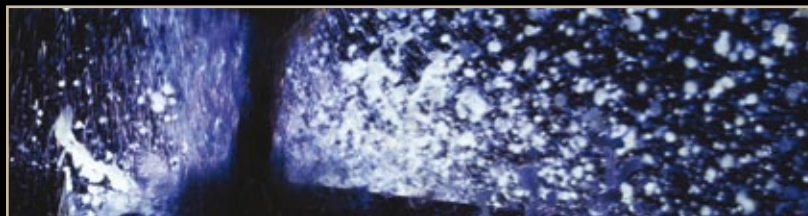

Of course, new processes demand new solutions and where required, we work closely with customers to develop bespoke fluids and lubricants for very specific applications.

**Our program of product research and development continues, and we maintain close contact with worldwide research organisations to keep ahead of the latest technological developments. It's a commitment that ensures our customers ultimately benefit from the most technically advanced solutions available.**

MILLERS OILS

Millers Oils has a reputation among its customers for the quality and technical excellence of its products. But it's not a position we take for granted. We know none of this would be possible without the highest standards of customer service, technical knowledge and support.

THE BACK STORY

### TECHNICAL SUPPORT

All our products are backed up by fast, accessible technical support. Our team of technical staff and engineers are always on hand to provide information and expert advice as and when it's needed. Many of the technical details and specifications relating to our products and their use with particular vehicles and equipment are held in our own extensive database, so the answers you need may be available already.

Where required, we provide support in the field, looking at the issues first-hand or taking samples for laboratory analysis. In fact, Millers Oils is one of the few oil companies to have its own dedicated analysis labs. **So, because we don't outsource these services, you receive the results faster and you get to deal directly with the technical staff handling your query.**

### SALES SUPPORT

UK customers benefit from direct contact with Millers Oils through our network of sales and business managers who cover the whole of the country. For international customers, our export team will be happy to discuss your needs and put you in touch with one of our international distributors.

**You'll find all the numbers you need on the back page.**

PRODUCT DEVELOPMENT

At Millers Oils, we work with leading suppliers to develop and bring to market some of the most technologically advanced products in the world.

Our independence makes an important difference here. Because we're not tied to a particular supplier we can select the very best from what's available, right the way across the market. So, when you choose Millers Oils, you know you're getting the highest quality products, with no compromises.

Our commitment to improving our products and developing new, more effective ones is ongoing. Our technical teams constantly challenge the status quo, developing new approaches and reviewing existing products regularly to identify further opportunities for development as technology moves on.

**As you'd expect, before we introduce any product to the market it undergoes extensive testing and passes through a rigorous quality control procedure. Which is why so many of our products exceed the specifications required by original equipment manufacturers.**

**In our view, there's no such thing as over-engineering.**
